

Your business, inside the AI you already have open.

Connect Claude, Codex or Grok to your Xorventa account and ask Xora for grounded answers and account work from there — drawn from the same approved Business Facts, under the same permissions you already set.

Included with your account. Connects in about a minute.

This document is in two parts

PART ONE Why connect an assistant

Why this matters · What it can reach · How far it goes · What it cannot do · How it is kept safe

PART TWO How to connect one

Before you start · Add the address · Approve it · Choose the permissions · Use it · Managing and disconnecting

PART ONE

Why connect an assistant

What it gives you, and where the limits are.

WHY THIS MATTERS

You are already in an AI window most of the day.

You are drafting something in Claude, or working through a problem in Codex, and you need to know what your opening hours actually say, or whether that review got a reply, or you want a post out before you forget. So you stop, switch to another tab, sign in, find the page — and the thread you were in is gone.

Connect your account once and you stop switching.

- **It is the same Xora.** Not a copy and not a second set of facts. The assistant you connect is reading the information you approved, through the same controls you use yourself.
- **It answers from your business, not the internet.** Ask what your cancellation policy says and you get your cancellation policy — or a plain admission that it is not on file.
- **It can do the work, if you let it.** Publish a prepared post, send a reply, update a setting — inside permissions you grant and can take back.
- **It works with what you already use.** Claude, Codex, Grok and other assistants that support MCP connectors.

WHAT IT CAN REACH

The same account Xora reaches. No more.

CONNECTED ASSISTANTS

Ask Xora from the AI you already use.

THE ASSISTANT YOU USE

- Claude
- ChatGPT
- Codex

...or any assistant that speaks the Model Context Protocol.

one secure connection

YOUR XORVENTA ACCOUNT

Xora, grounded in your approved Business Facts

The same assistant, the same facts and the same permissions you already set. She answers there exactly as she answers here.

WHAT STAYS WITH YOU

- Buying and billing
- Passwords and two-factor
- Connecting other services
- Anything you have switched off

AND YOU DECIDE HOW FAR IT GOES

Grant read-only and it can look things up and draft. Grant it more and it can publish, reply and send — still only inside the switches you already set for Xora. Or keep confirmation on, and every publish, send or delete waits for your tap in your Xorventa account. Disconnect any assistant at any time.

A connected assistant works through Xora's own list of actions — almost everything Xora can do on your account pages, across your chat windows, your social accounts, your search work, your business information, your email and your calendar. The short list of things that always stays with you is not offered to it at all; those actions are marked as withheld and cannot be requested.

It also cannot see your private conversations with Xora, or anything about your account you have not approved for use. It is not given content from your Google, Meta or Microsoft accounts — comment, message and email text, or Search Console and Analytics figures — or prices and offers.

HOW FAR IT GOES IS YOUR CHOICE

Four permissions, each one yours to tick or leave unticked.

YOU DECIDE HOW FAR IT REACHES

Four permissions. You grant them one by one.

The assistant asks for these when you connect it. You see exactly what it wants on one screen, and nothing works until you approve.

- 1 LOOK THINGS UP**
Read your approved facts, your drafts, what is waiting for you, and what each action would do. It can answer questions and explain. It changes nothing.
- 2 CHANGE SETTINGS**
Edit what you already have set up — a greeting, a reply rule, a schedule, your business facts. Only if you have also allowed Xora herself to change settings.
- 3 PROPOSE THE WORK**
Prepare a post, a reply or a deletion and send it to you. You confirm each one in your Xorventa account before anything happens. This is the cautious option.
- 4 DO THE WORK**
Publish, send and delete directly, without a separate confirmation — still only inside the switches you already set for Xora, checked again at the moment it runs.

Grant only what you need. Disconnect any assistant at any time — it stops working immediately.

Most people start at the first two and stay there for a while. Reading and explaining is genuinely useful on its own, and it changes nothing.

If you want the assistant to publish and send but would rather keep the final say, grant “propose the work” without “do the work”. Every publish, send or delete then waits for your confirmation in your Xorventa account — and you can reconnect granting more later if you change your mind.

WHAT IT CANNOT DO

What always stays with you inside Xora stays with you here too.

Connecting an outside assistant does not widen anything. If Xora cannot do it for you inside your own account, a connected assistant cannot either.

THE BOUNDARY

What she can reach, and what is only ever yours.

SHE CAN DO THIS
161 actions across your account

- ✓ Look things up and explain them
- ✓ Take you straight to the right page
- ✓ Change settings you already have
- ✓ Add and curate business information
- ✓ Write and edit social posts and campaigns
- ✓ Publish a post, send a reply, send an email
- ✓ Prepare and apply SEO work
- ✓ Remove drafts, posts, sources and records

SHE CANNOT DO THIS
38 actions stay with you

- Enter or change a payment card
- Buy anything, or change a plan
- Cancel a product you pay for
- Change your password or email
- Set up or change two-factor
- Close your account
- Sign in to another company for you
- Create or delete a chat window

Money	Entering or changing a card, buying anything, changing a plan, cancelling a product. It is not shown prices or offers, and it cannot spend.
Signing in	Your password, your account email, two-factor and recovery codes are yours. So is closing your account.
Other companies	It cannot sign in to a social network, a mailbox, Google, Bing, Wix or WordPress on your behalf.
Your switches	It cannot turn Xora's permissions on, widen its own access, or act outside what you granted. Your switches are checked again at the moment anything runs.
Your private context	It cannot read your own private conversations with Xora.

HOW IT IS KEPT SAFE

One connection, visible and revocable.

- **You approve it on one screen.** The assistant registers itself and asks. You see exactly what it wants, in your own account, and nothing is connected until you approve it there.
- **It is tied to one account.** A connection is bound to your Xorventa account and cannot reach anybody else's.
- **Everything is recorded.** What the assistant did is listed in your account alongside your own actions and Xora's, marked as coming from the connection.
- **You can see it being used.** Connected AI assistants, in Profile Settings, lists each one with when it was last used.
- **You can cut it off instantly.** Disconnect and it stops working immediately — not at the end of a session, not tomorrow.

Ready to connect one? Part two starts on the next page.

PART TWO

How to connect one

From adding the address to managing it afterwards.

BEFORE YOU START

There is very little to it.

- **A Xorventa account you can sign in to.** You will approve the connection inside it.
- **An assistant that supports connectors.** That means Claude, Codex, Grok and other assistants that support MCP connectors. The setting is usually called connectors, integrations or tools.
- **A minute.** Genuinely. The longest part is deciding which permissions to grant.

STEP BY STEP

Connecting an assistant.

Step 1 — Add Xorventa as a connector

In your assistant, add a new connector and give it this address:

`https://api.xorventa.ai/mcp`

Step 2 — Approve it in your Xorventa account

Your assistant sends you to Xorventa. Sign in and you will see one screen listing exactly what it is asking for. Read it — this is the screen that matters. Nothing is connected until you approve it here.

Step 3 — Choose how far it goes

On that same screen you grant the permissions from part one. If you are not sure, grant the reading permission only. You can reconnect later granting more, and nothing is lost by starting narrow.

Step 4 — Ask it something

Go back to your assistant and ask a question about your business — “what are my opening hours on Saturday?” or “what is waiting for my approval?”. If the answer comes back from your own approved information, the connection is working.

AFTERWARDS

Managing what you have connected.

- **Find them in your account.** Open Profile Settings and find Connected AI assistants. Each one shows when it was last used.
- **Confirm anything waiting.** If you granted “propose the work” rather than “do the work”, proposed posts, replies and deletions wait for you there. Approve or decline each one.
- **Check what it has been doing.** The assistant's actions appear in your account's record alongside your own.
- **Disconnect when you want to.** One click, and it stops working immediately. Reconnect later if you change your mind — you will approve the permissions again.

And if you would rather not connect anything at all, nothing changes. Xora works exactly as she always has inside your account.

Connect one and see.

It is included with your account. Add the address, approve the reading permission, and ask it what needs your attention today.
